

① Sample Data Seed

- Sample scenario & topic & persona
- Configure update directive
- Rewrite persona

**Scenario**
Career & Learning

**Topic**
Work Habits

**Persona**
A computer science student who is also learning LaTeX and uses agent assistant as a practical copilot.

**Update Directives**
The user is preparing for IELTS. Then the user has already taken the IELTS exam; delete this memory.
...

② Dialogue Generation

- Generation dialogue & split session
- Extend & trim session
- Quality audit & Patch

**User Profile Init**

Preferences: For note-system advice, friction first and features second.
Habits: Handwrites on a tablet for equation-heavy theory lectures.
...

**Sessions**
User: new development, i'm not going by Obsidian anymore for this. [Jan 14, 2026, 13:12:18]
Assistant: Then the change matters. What replaced it? [Jan 14, 2026, 13:13:48]
...
...

③ Memory Capture

- Capture each session
- Quality audit & Patch

**User_profile**
The user prioritizes boring reliability over markdown aesthetics in note tools.

**Fact**
The user's note system is now OneNote.

**Agent_identity**
The user wants the assistant to keep replies shorter by default from now on.

**Agent_method**
For tool comparisons, the assistant should give three options maximum by default.

**Agent_knowledge**
Many drafts fail because they are author-centred rather than reader-centred.

**Episodic**
The assistant said it will treat OneNote as the base ...

④ Memory Update

- Update each session
- Build lineage pairs
- Quality audit & Patch

**Delete_memories**
User_profile:
The user uses Obsidian on their laptop for notes.

Agent_identity:
For tool comparisons, the assistant should give three options maximum by default.

**Add_memories**
Fact: The user's note system is now OneNote rather than Obsidian.

⑤ QA Generation

- Subject filter
- Generate QA & Recall
- Semantic audit & Patch

**QA**

Query: For the user's note-tool problems, what diagnostic order should the assistant keep using, and which later software-switch principle keeps that order from collapsing into brand loyalty?

Answer: The assistant should diagnose note-tool problems by checking capture first, sync second, and organization third, and if software changes are considered, it should judge them by whether they solve the actual problem rather than getting sentimental about any tool.

Recall_memories: For the user's note-tool problems, the assistant should ...
